US PLAYGROUND SURFACING LMADRS Playground Matting - HERE ARE THE FACTS!

Here is some straight-to-the-point information that will help to explain why LMADRS matting is becoming so popular. Don't miss out, read below. Why are LMADRS playground wheelchair-accessible mats/matting so popular as an affordable option to improve accessibility, inclusion, and safety while significantly reducing maintenance costs for public playgrounds?

It's simple - Because they solve four recurring issues at once - accessibility, inclusion, safety, and maintenance; all without the cost or disruption of replacing an entire playground surface.

You won't choose another surfacing after you read below.

1. It is 'Truly' Wheelchair Accessible & Inclusive (Playground Surfacing)

- **Our LMADRS mats create a Firm, Stable, Slip-resistant surface**

LMADRS (Low-Maintenance, Accessible, Durable Rubber Safety) mats are designed to create firm, stable routes, turning spaces, and use zones laid over Engineered Wood Fiber (EWF) or poured-in-place rubber, so wheelchairs, walkers, and strollers can move easily instead of bogging down in loose chips.

- **Mass 521 CMR compliant**

The system is specifically marketed and tested as Accessibility Matting . It is verified as compliant with Massachusetts 521 CMR wheelchair accessibility requirements, making it attractive to municipalities, schools, and housing authorities that must demonstrate compliance.

Why is this Important? Massachusetts Schools & Agencies can take an existing wood-fiber playground that's technically "accessible on paper" and turn it into something that's *actually* usable by kids and caregivers with mobility devices—often fully installed in one day.

- **Economically repair & extend the life of failing poured-in-place playground surfaces.** LMADRS matting *repairs, improves, and extends the life* of failing poured-in-place surfacing.

Testing on aged poured-in-place rubber shows that LMADRS mats significantly improve safety by reducing G-max and HIC values. This improves impact performance, as the old surfacing ages, fails, peels, cracks, and shrinks.

The FIX is in - now owners can economically extend the life of their poured-in-place playground safety surfacing while still meeting current safety standards, without removing the existing surfacing.

US PLAYGROUND SURFACING LMADRS Playground Matting - HERE ARE THE FACTS!

Transform these failures into this extended life, accessible, and durable surface.

IPEMA Certified testing

- **Tested to key playground safety standards**

LMADRS mats installed over EWF are tested to ASTM F1292 (impact attenuation) and ASTM F3351-19, with certifications available.

- **Very high critical fall heights**

When combined with compacted EWF, the system is IPEMA-certified up to a 20-ft critical fall height (10 ft with 6" EWF, 16 ft with 9", 20 ft with 12").

2. Maintenance Friendly – Significant reduction in daily & long-term maintenance

- **Keeps loose surfacing in place**

Installed over EWF, the mats stop the constant displacement you see under swings, slide exits, and high-traffic paths. That means far less or no raking, topping off, and re-grading.

- **Protects the underlying surfacing**

The LMADRS matting absorbs the brunt of traffic and weather, helping the EWF or PIP below last longer and improving its impact performance.

- **Durable and modular**

They're attractive, heavy-duty rubber panels with a 5-year factory warranty. They are easy to replace or expand in sections, rather than redoing the whole playground.

You can buy time! Maintenance staff & crews spend less time on playground maintenance, and more time on other priorities—while budget stays closer to a wood-fiber system than a complete poured-in-place replacement.

3. Fast to install, customizable upgrades for existing playgrounds

US PLAYGROUND SURFACING LMADRS Playground Matting - HERE ARE THE FACTS!

- **Installed over EWF or PIP**

Because it's a matting system, LMADRS doesn't require you to demo the existing surface. You can add mats across the playground or where accessibility is more needed: entry points, transfer stations, along routes between decks, at swings, and at borders.

- **Can transform a site in a day**

US Playground Surfacing markets LMADRS as able to "completely transform an inaccessible playground into a universally accessible and inclusive play area in as little as one day," a key selling point for schools and towns that can't shut down a playground for weeks.

4. **Clean, professional, finished look.**

- The mono-chromatic, black mats create a **clean, uniform look**, eliminating scattered mulch, rutting, and muddy patches around equipment and along accessible paths.
- That more "finished" appearance matters to parents as well as Boards Of Education, Select Boards, Park And Recreation Departments, DPWs, HOAs, housing authorities, when they're showing taxpayers or residents where money went.
- **Attractive, accessible, inclusive, economical, fast and low maintenance; Six for Six!**

Simply put, LMADRS Matting offers playground owners poured-in-place accessibility, inclusion, safety, and low maintenance at a much more reasonable price.

It makes accessibility, inclusion, and safety easy to see, easy to use, and budget friendly.
